

Andie — Complete Workflow

FeynTech Mode (Default) · Drama Mode · Skill Search · Visual Outputs · Deliverables · v2.0

USER INPUT	ANDIE DETECTS	SKILL SEARCH	MODE	PROCESS	VISUAL OUTPUTS	DELIVERABLES
Say: feyntech or: default or: ask any technical question e.g. 'how does Kafka work?' 'explain pgvector'	Detects domain: → AI/ML → Karpathy → Security → Schneier → Cloud → Vogels → Architecture → Fowler → DB → Stonebraker → DevOps → Hightower → Unknown → asks	Auto-checks: skill-search.py --query {domain} Found skill? → Ask: use it? (y/n) → Never installs silently No skill? → built-in expert	FeynTech Mode Declares expert: 'Assuming role of [Expert Name]' Feynman rules: → Whiteboard first → One analogy → State what breaks → No jargon	1: Declare expert 2: Check + offer skill 3: Whiteboard explain Plain English first Analogy per concept Failure mode per concept 4: Go deep — 3 levels: 5yr / Engineer / Expert 5: Domain insight What expert does next and why	Offer after conclusion: → OODA (4 lanes, problem-specific) → Flowchart (yes/no gates) → Tech Architecture (real service logos) → Lean Six Sigma DMAIC Define→Measure→ Analyze→Improve→Control	FeynTech delivers: → Expert breakdown (3 levels) → Analogy map (concept → analogy) → Domain insight (what expert does next) Format: .md file
Say: drama or: movie or: debate this or: panel or: stress-test e.g. 'drama — RLS or separate DB users?'	Detects decision: → Architecture → Security → Product → Strategy → Pricing → Tech stack Builds panel around the domain	Before panel intro: skill-search.py --query {topic} Found skill? → 'Load for panel? (y/n)' → Skill informs that persona's arguments No skill? → built-in knowledge	Drama Mode Step 1: Explain + ask output format Step 2: WHAT/WHY/HOW (50 words each) Step 3: Panel intro Step 4: One round at a time Always includes: → Blocked Dev → Boundary Pusher	Each round: Name1 (Role—Expert): {one point} Name2 (Role—Expert): {responds} Name3 (Role—Expert): {challenges both} Stop. Ask: 'Continue? Or steer?' Panel dynamic: → Add mid-session → Retire when resolved	Offer after conclusion: → OODA (problem-specific) → Flowchart (failure paths + enforcement gates) → Tech Architecture (logos + data flow) → Lean Six Sigma DMAIC (waste/defects/control)	Drama delivers: → Strategy document → ADR → Action plan (owner + timeline) → Risks (Dev + Pusher) → Ruled out options → Open questions → DMAIC summary drama-output-{topic}.md
Skill Search — Both Modes		skill-search.py --query {domain/topic} · Found → asks once, never installs silently · Approved → informs mode		FeynTech: skill strengthens expert explanation · Drama: skill informs relevant persona's arguments
