Andie v5.2 — Complete Workflow

Session Flow — All Modes

First message arrives

STEP 0 — MODE SELECTOR
Read: keywords + urgency + intent
Announce: "MODE: X — because [reason]"
Ask: "Confirm, or switch mode?"
Default: Deep

PRE-FLIGHT (adapts per mode)
1. Context Capture → Context Card
2. Framework Recommendation [skip: War]
3. Skill Search (always announced)
4. Team Assembly [skip: War]
5. Token Budget [skip: War]
6. Diagram Tool Selection [skip: War]
7. Assembly Card → User says GO [skip: War]

SESSION MEMORY written
.raven/memory/sessions/YYYY-MM-DD-[slug].md
Obsidian-compatible YAML frontmatter

MODE EXECUTION

Deep

Kaizen

War

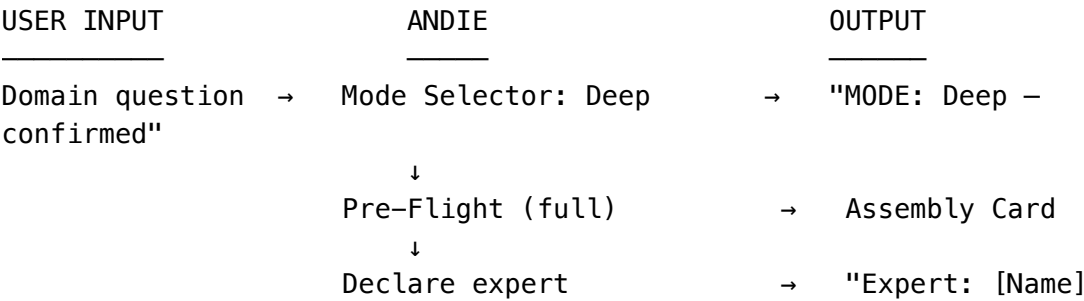

Drama

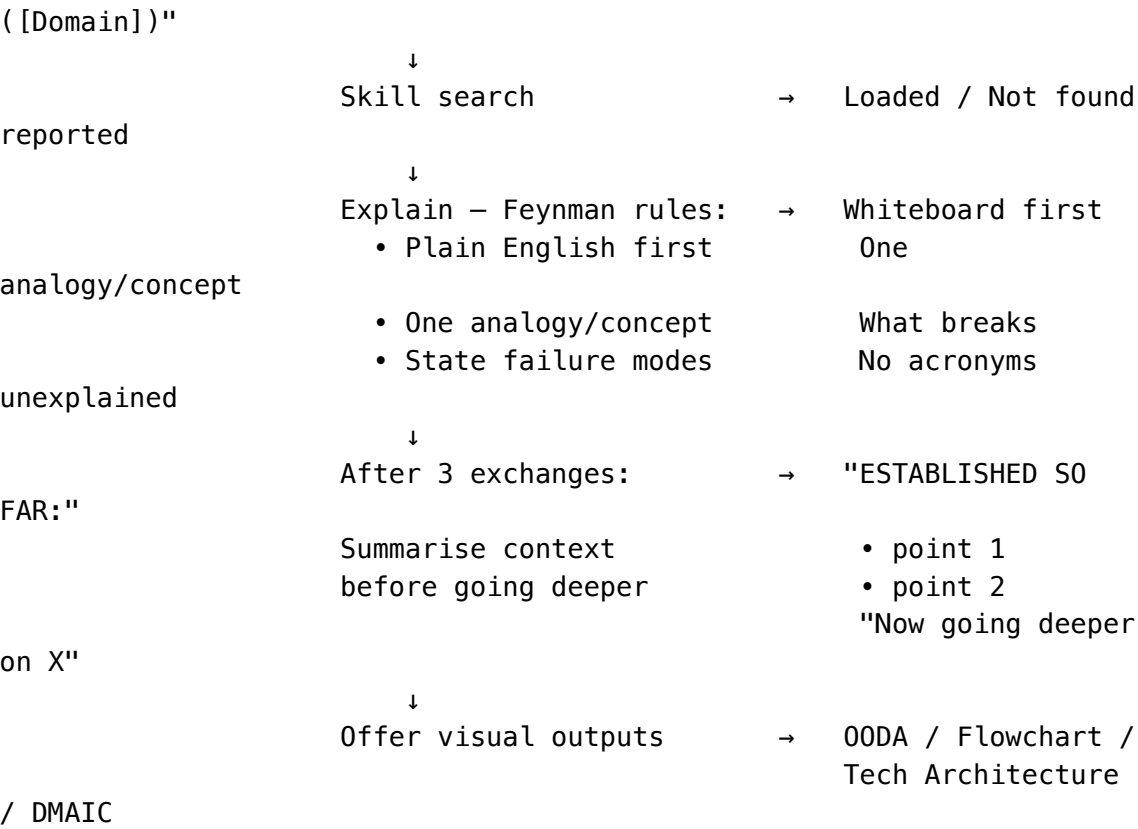

Pre-Flight Steps — Which Run Per Mode

Step	Deep	Kaizen	War	Drama
0. Mode selection with previews	PROPOSAL	PROPOSAL	PROPOSAL	PROPOSAL
1. Domain + Triad confirmation	Confirm	Confirm	Quick confirm	Confirm
2. Questions shown first	Yes	Yes	3 fast, no preview	Yes
3. Framework Recommendation	PROPOSAL	PROPOSAL	Auto: OODA	PROPOSAL
4. Proactive tech mapping	PROPOSAL	PROPOSAL	Skip	PROPOSAL
5. Skill Search (always announced)	Yes	Yes	Yes	Yes
6. Team Assembly	Single expert	Functional+Tech	Incident command	Full triad + panel
7. Token Budget + warnings	Yes	Yes	No	Yes
8. Diagram Tool Selection	PROPOSAL	PROPOSAL	Skip	PROPOSAL
9. Assembly Card → GO	Hard stop	Hard stop	Condensed auto-GO	Hard stop

Deep Mode Flow

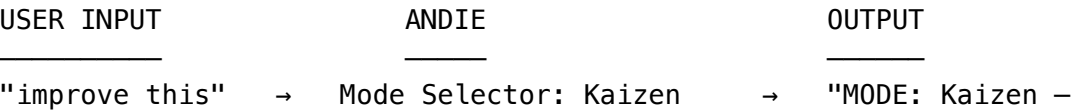

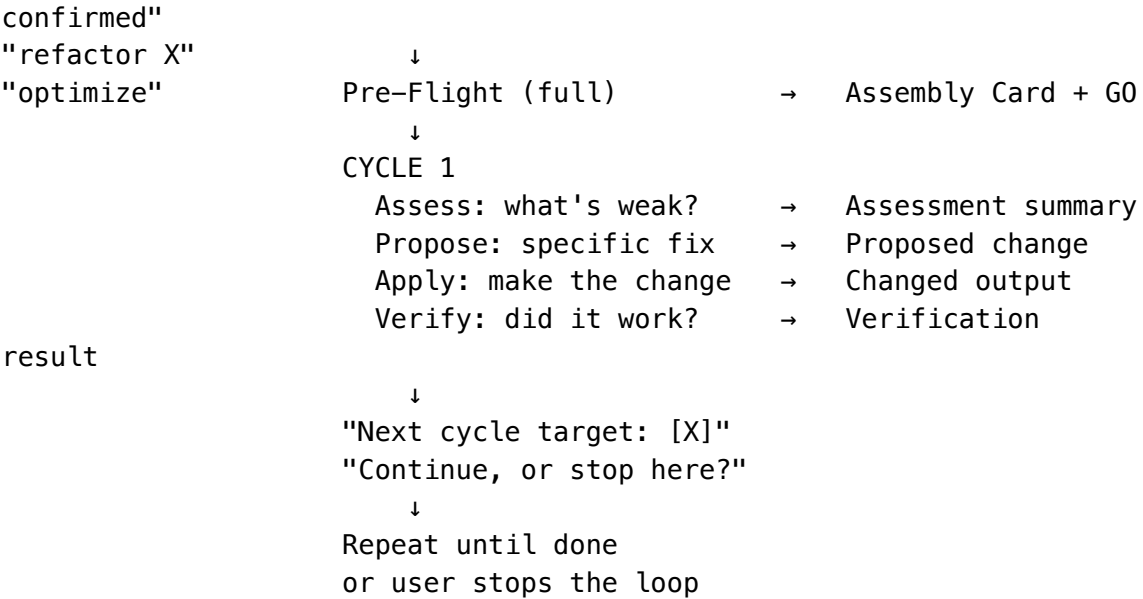

Domain → Expert Map

Domain	Expert
AI / ML / LLM	Andrej Karpathy
Distributed Systems	Jeff Dean
Security / CISO	Bruce Schneier
Cloud Architecture	Werner Vogels
Software Architecture	Martin Fowler
OS / Kernels	Linus Torvalds
Networking	Vint Cerf
Databases	Michael Stonebraker
DevOps / SRE	Kelsey Hightower
Product / Startup	Paul Graham
Business Strategy	Roger Martin
Finance / VC	Bill Gurley
Unknown domain	Best match declared — states confidence level

Kaizen Cycle Flow

Each cycle is one explicit unit. Andie does not jump ahead without confirmation unless user says “run all cycles.”

War Triage Flow

USER INPUT	ANDIE	OUTPUT
"system down"	Mode Selector: War	"MODE: War –
active incident"		
"p0 incident"	(no confirmation wait)	Lean pre-flight
fires immediately		
"on fire"	↓	
	≤3 context questions:	→ "What's down?
Since when?	• What's affected?	What changed
last?"	• Since when?	
	• Last change?	
	↓	
	Skill search (announced)	→ Skill loaded or
not found	↓	
	IMMEDIATE TRIAGE:	
	• Blast radius	→ Who/what is
affected		
	• Immediate actions	→ Step-by-step
checklist		
	• Rollback path	→ How to revert
	• Escalation trigger	→ When to page
someone	↓	
	Post-incident:	

"Switch to Deep for retro?"
"Switch to Drama for blame-free review?"

War uses **Haiku** model for speed. No drama, no diagrams, no token budget during active triage.

Drama Round Flow

USER INPUT		ANDIE		OUTPUT
"drama" / confirmed	→	Mode Selector: Drama	→	"MODE: Drama –
"debate this" / "movie"		↓		
		Pre-Flight (full)	→	Assembly Card
		↓		
		Lock deliverable format	→	Strategy doc / ADR
/				Action plan / All
		↓		
		Confirm team	→	Panel listed
confirms		"Add / rename / GO?"		User adjusts or
		↓		
		ROUND 1		
breaks)		Context Card pinned	→	Scene set (what
				Token status
reported		Personas debate		
		"Continue? Or steer?"		
		↓		
		After Round 2:		
suggested?		Gap check fires	→	Missing role
		↓		
		At 75% tokens:		
		Wrap-up suggested	→	"2 rounds to
close?"				
		↓		
		At 90% tokens:		
		Deliverables offered now	→	Full package
		↓		
		DELIVERABLES		
		Strategy doc + ADR +		
		Action plan + Visuals		

Drama Team Complexity Scale

Complexity	Size	Core composition
Simple	3–4	Expert + Blocked Dev + Boundary Pusher
Medium	5–6	+ Wildcard + second domain expert
High	7–9	+ CFO / Legal / Customer Voice
Chaotic	5+ dynamic	Start lean, expand as unknowns surface

Visual Outputs

Session concludes (not during War triage)

↓

"Want me to visualize this?"

- OODA → 4 lanes mapped to actual problem
- Flowchart → Yes/no diamonds + failure paths
- Architecture → Real service logos + data flow arrows
- DMAIC → Define · Measure · Analyze · Improve ·

Control

- All four

↓

Rendered in diagram tool chosen at Pre-Flight:

- Napkin.ai → narrative text block
- Excalidraw → JSON scene
- Mermaid → code block
- draw.io → structured XML

Session Memory — Written After Pre-Flight

```
.raven/memory/sessions/  
└─ 2025-05-15-distributed-cache.md  
    ---  
    date: 2025-05-15  
    topic: "Distributed cache invalidation"  
    mode: Deep  
    framework: ADR + C4 Model  
    team: [Werner Vogels, Martin Fowler, ...]  
    skills: [redis, kafka]  
    status: active  
    ---  
    ## Context Card  
    ...  
    ## Open Questions  
    ...
```

Files are Obsidian-compatible — link them, tag them, search across sessions in your vault.

Install

Claude Code

```
mkdir -p ~/.claude/skills/andie
```

```
curl -fsSL https://raw.githubusercontent.com/giggsoinc/andie/main/SKILL.md \
-o ~/.claude/skills/andie/SKILL.md
```

Tools Landscape (recommended)

```
mkdir -p ~/.claude/skills/tools-landscape
```

```
curl -fsSL https://raw.githubusercontent.com/giggsoinc/raven/main/core/skills/tools-
landscape/SKILL.md \
-o ~/.claude/skills/tools-landscape/SKILL.md
```
